

ORIIUM

Case Study

How ORIIUM and Softcat helped an international law firm save time and money with their data protection solution

About Softcat

Softcat is one of the UK's leading IT infrastructure providers with a comprehensive portfolio of IT services, which help its customers address their complex IT challenges.

The Problem

Softcat approached ORIIUM looking for a solution to address their customers data protection requirements and to urgently reduce their current backup window, which was impacting on the customer's daily operations.

The Solution

ORIIUM deployed their Unified Data Management Solution 'CX:Protect' to perform backup operations for the customer.

Benefits

- Reduction in backup window
- Time saving to staff to manage operations
- Cost effective backup solution
- Scalable for future expansion

As a channel service provider, ORIIUM works with Softcat to provide a number of services and solutions for their customers.

When an international law firm approached Softcat seeking the best solution to solve their data migration and protection requirements, Softcat turned to the experts at ORIIUM for a comprehensive solution to meet their customers needs.

The customer was wanting to migrate their data from its current physical infrastructure to a new virtual environment. As part of this migration, the customer also needed to reduce the current backup process, which at present was exceeding 5 days to complete a backup of 194TB.

Data Protection Management and Services Solution

ORIIUM worked with the customer to fully assess their current backup infrastructure issues and virtualisation requirements and designed a comprehensive plan of action to help the customer achieve its end goal.

Using the professional services of ORIIUM's highly skilled engineers, the current physical estate was transitioned and converted to a fully virtual environment.

During this transition, ORIIUM also used their CX:Protect service to provide a new data protection solution for the customer's infrastructure, that allowed them to reduce their current backup operation windows from 5 days to only 6 hours, saving the customer a considerable amount of time and money.
